

CLAIMS

Claims 1–55 (Canceled)

56. (Currently Amended) A method comprising:

electronically receiving, with an interface device, a definition of a first group identifying a first plurality of users;

automatically generating, with a processing system, the first group having the first plurality of users according to the definition of the first group, where the first group is a private group having content available to one or more owners of the first group and unavailable to non-owners of the first group;

electronically receiving, with the interface device, a definition of a second group identifying a second plurality of users;

automatically generating, with the processing system, the second group having the second plurality of users according to the definition of the second group, where the second group is a private group having content available to one or more owners of the second group and unavailable to non-owners of the second group;

receiving a definition of a desired group with the interface device, where the definition of the desired group explicitly specifies that the first group is to be included in the desired group and explicitly specifies the second group is to be excluded from the desired group; and

automatically generating, with a processing system, the desired group to include the first group and exclude the second group according to the received definition of the desired group, where the desired group includes the content of the first group, where the desired group is a public group allowing the content of the first group to be available to both the owners of the first and second groups and the non-owners of the first and second groups.

57. (Previously Presented) The method of claim 56 where the definition of the first group or the second group identifies one or more properties shared by the users in the first group or the second group; and

dynamically generating the first group or the second group according to the received definition.

58. (Previously Presented) The method of claim 56 where the definition of the first group or the second group statically defines the users in the group; and generating the first group or the second group according to the received definition.

Claim 59 (Canceled)

60. (Previously Presented) The method of claim 56 includes electronically receiving a definition of a third group of a plurality of users, where the third group is a public group having content available to both the owners of the first and second groups and the non-owners of the first and second groups; and

electronically receiving a definition of a desired public group, where the definition of the desired public group specifies that the first group and the third group are to be included in the different desired group and the second group is to be excluded from the desired public group, where the desired group includes the content of the first group and the third group.

61. (Previously Presented) The method of claim 56 includes electronically receiving a definition of a third group of a plurality of users, where the definition of the desired group specifies that the first group and the third group are to be included in the desired group and the second group is to be excluded from the desired group.

62. (Previously Presented) The method of claim 56 includes electronically receiving a definition of a third group of a plurality of users, where the definition of the desired group specifies that the first group is to be included in the desired group and the second group and the third group are to be excluded from the desired group.

63. (Currently Amended) An apparatus comprising a computer-readable medium having instructions, when executed by a computational system including a processor or multiple communicating processors, cause the computational system to perform a method comprising:
receiving a definition of a first group identifying a first plurality of users;
generating generate, with the computational system, the a first group having the a first plurality of users according to the a definition of the first group received with an interface device

of the computational system, where the first group is a private group having content available to one or more owners of the first group and unavailable to non-owners of the first group;

~~receiving a definition of a second group identifying a second plurality of users;~~

~~generating generate, with the computational system, the a second group having the a second plurality of users according to the a definition of the second group~~ received with the interface device of the computational system, where the second group is a private group having content available to one or more owners of the second group and unavailable to non-owners of the second group;

~~receiving a definition of a desired group, where the definition of the desired group specifies that the first group is to be included in the desired group and the second group is to be excluded from the desired group; and~~

~~generating generate, with the computational system, the a desired group to include the first group and exclude the second group according to the received a definition of the desired group~~ received with the interface device of the computational system, where the desired group includes the content of the first group, where the desired group is a public group allowing the content of the first group to be available to both the owners of the first and second groups and the non-owners of the first and second groups.

64. (Currently Amended) The apparatus of claim 63 where the definition of the first group or the second group identifies one or more properties shared by the users in the first group or the second group[[:]], and where the computational system is configured to dynamically generating generate the first group or the second group according to the received definition.

65. (Currently Amended) The apparatus of claim 63 where the definition of the first group or the second group statically defines the users in the group[[:]], and where the computational system is configured to generate generating the first group or the second group according to the received definition.

Claim 66 (Canceled)

67. (Currently Amended) The apparatus of claim 63 ~~includes~~ where the computational system is configured to:

~~receiving~~ receive a definition of a third group of a plurality of users, where the third group is a public group available to both the owners of the first and second groups and the non-owners of the first and second groups; and

~~receiving~~ receive a definition of a desired public group, where the definition of the desired public group specifies that the first group and the third group are to be included in the different desired group and the second group is to be excluded from the desired public group, where the desired group includes the content of the first group and the third group.

68. (Currently Amended) The apparatus of claim 63 ~~includes~~ where the computational system is configured to ~~receiving~~ receive a definition of a third group of a plurality of users, where the definition of the desired group specifies that the first group and the third group are to be included in the desired group and the second group is to be excluded from the desired group.

69. (Currently Amended) The apparatus of claim 63 ~~includes~~ where the computational system is configured to ~~receiving~~ receive a definition of a third group of a plurality of users, where the definition of the desired group specifies that the first group is to be included in the desired group and the second group and the third group are to be excluded from the desired group.

Claims 70-76 (Canceled)

77. (Previously Presented) A device comprising:

an interface to receive definitions of a plurality of groups, each group specifying a plurality of items and indicating that the group is either available for inclusion into a desired group or not available for inclusion into the desired group, where a definition of the desired group explicitly specifies that a first group is to be included in the desired group and explicitly specifies a second group is to be excluded from the desired group, where the first group is a private group having content available to one or more owners of the first group and unavailable to non-owners of the first group, where the second group is a private group having content

available to one or more owners of the second group and unavailable to non-owners of the second group; and

a processing system to generate a desired group from at least one of the plurality of groups available for inclusion into the desired group and exclude all of the plurality of groups not available for inclusion into the desired group according to the received definition of the desired group, where the desired group includes the content of the first group, where the desired group is a public group allowing the content of the first group to be available to both the owners of the first and second groups and the non-owners of the first and second groups.

78. (Previously Presented) The device of claim 77 where the definition of the at least one of the plurality of groups identifies one or more properties shared by the items in the group, where the processing system is configured to generate the group according to the received definition.

79. (Previously Presented) The device of claim 77 where the definition of the at least one of the plurality of groups statically defines the items in that group, and where the processing system is configured to generate the group according to the received definition.

Claim 80 (Canceled)

81. (Previously Presented) The device of claim 77 where the processing system is configured to generate another desired group from at least one of the plurality of groups available for inclusion into the another desired group and the previously generated desired group, the processing system excluding all of the plurality of groups not available for inclusion into the desired group.

82. (Previously Presented) The device of claim 77 where the processing system is configured to manage security of communications over a network according to at least one of the desired group or the plurality of groups, the processing system to manage security of communications over a network by associating one or more network security privileges or resources accessible on the network with the desired group or the plurality of groups.

83. (Previously Presented) The apparatus of claim 63 where the definition explicitly specifies that the first group is to be included in the desired group and explicitly specifies the second group is to be excluded from the desired group.

Claims 84 (Canceled)

85. (Previously Presented) The device of claim 77 where the definition explicitly specifies that the first group is to be included in the desired group and explicitly specifies the second group is to be excluded from the desired group.
